EDUCATION

Program	Institution	%/ CGPA	Year of completion
Bachelor of Technology	Indian Institute of Technology Madras, Chennai	7.27/10	2021

PROFESSIONAL EXPERIENCE AND PROJECTS

Software Developer, William O'Neil India Pvt Ltd, Bangalore November 2023-present

Panaray Assistant Bot - Python + FastAPI + LangGraph + RAG

- Built a **RAG-based knowledge base** for Panaray's equity research platform using **LangGraph + Pinecone DB + LLMs**, helping users navigate a large, feature-rich application through semantic search across platform features, reports, settings, and documentation.
- Engineered an **agentic tool-calling** system backed by **LangGraph** state machines, solving the friction of complex platform navigation by enabling users to modify account settings, configure alerts, trigger actions, and run multi-step workflows through text.

Panaray Web Application - Python + React.js + Redux + PostgreSQL + Flask

- Implemented frontend **WebSocket** integration to stream **real-time, low-latency** AI analysis data on stocks from Panaray **AI News APIs**, and built **CI/CD pipelines** automating continuous deployment across multiple environments for faster, safer releases.

Panaray AI Services - Python + FastAPI + LangGraph + RAG

- Built an **AI-powered research bot** aggregating internal reports, external APIs and live web search into a **multi-format report pipeline** using **RAG** with **LLMs**, producing bull/bear cases, price trends, quarterly financial analysis and investment theses.

Software Developer, ThreeSides Corporation, Japan June 2021-November 2023

Threease Pro - React.js + Javascript + Redux + REST API

- **Developed** and **maintained** the frontend side of numerous systems including shift management system, mail services system.
- Implemented **reservation system** in Threease Pro, having a **customizable calendar** and form to create, update and view reservations

Threesides Navi Application - Flutter Application + Python + Mongo DB

- **Leading** the **development** and **deployment** processes for cross platform (IOS + Android) job search mobile applications using **flutter**.
- **Built** end-to-end **recruitment management** from **scratch** with features, including job search and filtering, direct messaging to companies, job place visits, company review management, deep links, job deep link sharing, and app rating management, etc.

Software Developer(Intern), Indegene Pvt. Ltd., Bangalore May 2020 - July 2020

- Develop a model to get **semantic similarity** between two tables. Trained vector embedding model and **faiss** to get similarity.
- Build a **ML model** to classify whether a given text is heading or not. Used **natural language processing** and **Deep learning**.

Startups | Projects | Vibe Coding

CourtNG | AI Sports Court Operating System & Match Orchestration Engine - Python + YOLO + SAM 3 + FastAPI

- Building CourtNG to eliminate poor court experiences caused by the lack of quality referees, an **AI sports court operating system** that automates line calls, player tracking and match officiating using **on-premise computer vision**, fully offline on edge hardware.
- Fine-tuned **YOLO** detection models and **Segment Anything Model 3 (SAM 3)** on annotated **tennis and pickleball** datasets to detect, segment and track court lines, ball, rackets and players in real time from live **RTSP** camera streams for automated line calling.
- Created a **match orchestration engine** that fuses per-frame detections into live game state (court calibration, ball tracking, rally detection, scoring and rule enforcement) via an **LLM tool-calling** agent, streaming events to an umpire client over **WebSockets**.
- Envisioned as the foundation for **AI match orchestration** and **AI-driven player training**, turning every rally into structured, labeled data for personalised coaching feedback, drills and skill analytics for players at every level. Check out the [Demo](#).

Vulrend.com - Co-Founder | Vibe Coding | Ai Full-Stack SaaS (vulrend.com)

- Building vulrend.com, a multi-tenant SaaS that turns any topic into a scheduled feed of **AI-generated, narrated short-form video** ads and reels, scripted by LLMs, rendered and auto-published to social accounts end to end with zero manual editing.
- Architected **5 independently deployable microservices** (API, render, publish, asset, trend) on **GCP** with **FastAPI + PostgreSQL + React**, orchestrated by a **LangGraph** content pipeline and a DB-backed job queue, covered by **800+ automated tests** across services.
- Designed a declarative **Template Spec DSL** (LLMs emit validated, versioned JSON instead of code) driving an **ffmpeg** render engine with per-line **TTS**, **Whisper** word-timed captions and metadata-scored asset matching at just ~\$0.03 per rendered reel.
- Built a **trend-service** that mines recurring ad patterns across advertisers and promotes only those validated by our own reels' performance, a closed **feedback loop** that keeps every generated ad and reel improving with each new campaign published.

SKILLS

Python + Javascript	FastApi	React.js	AWS EC2/ S3	Web sockets	PosgreSQL	Rest API's
LLM's + RAG + Agents	LangGraph	PyTorch	Computer Vision	YOLO	Deep Learning	Machine Learning

SCHOLASTIC ACHIEVEMENTS

- Cleared 1st phase for **National Talent Search Examination**. Only **180** students from the states (Madhya Pradesh) are shortlisted.
- Secured **99.6** percentile in **JOINT ENTRANCE EXAMINATION Mains 2017** from among the **1.2 million** candidates.
